		The glove material has to be impermeable and resistant to the product/
		the substance/ the preparation.
		Due to missing tests no recommendation to the glove material can be
		given for the product/ the preparation/the chemical mixture.
		Selection of the glove material on consideration of the penetration times,
		rates of diffusion and the degradation.
		· Material of gloves
		The selection of the suitable gloves does not only depend on
		the material, but also on further marks of quality and varies from
		manufacturer to manufacturer. As the product is a preparation
		of several substances, the resistance of the glove material can
		not be calculated in advance and has therefore to be checked
		prior to the application.
		· Penetration time of glove material
		The exact break through time has to be found out by the
		manufacturer of the protective gloves and has to be observed.
		· For the permanent contact of a maximum of 15 minutes gloves made of
		the following materials are suitable:
		Butyl rubber, BR
		Nitrile rubber, NBR
